# About us

To remove mental and physical challenges from the minds of individuals by providing them with a loving environment to free them from fear and self-pity along with education and training that will create competence in personality in their respective fields and instill a sense of self-worth to seek joy and independence.

## vision

Smart contracts are the most exciting innovation in the blockchain industry. They are a gift from God to humanity and, if implemented wisely, have the potential to change the entire cryptocurrency industry forever. Numerous smart contracts/arrays have been developed since their inception, enriching many people to date. However, when compiling them, some gaps must be addressed if we are to use them as a more powerful and secure tool for generating wealth through the blockchain/cryptocurrency industry and make it a sustainable career.

## MISSION

Our mission is to reach as many people/communities as possible looking for lifetime income opportunities through a safe/affordable/easy and simple decentralized platform.

# Binance

## A key point in blockchain technology

### Bnb Smart Chain

BNB Smart Chain (BSC), now part of the larger BNB Chain ecosystem, is a high-performance blockchain network developed by Binance that allows for the creation and execution of smart contracts, essentially enabling decentralized applications (dApps) to be built on its platform; it's known for its fast transaction speeds and low fees, using the native BNB token to power the network and pay for transaction costs.

#### Key points about BNB Smart Chain:

- Functionality:
- Enables the development of decentralized applications (dApps), particularly in the DeFi (decentralized finance) space.
- Compatibility:
- Designed to be compatible with the Ethereum Virtual Machine (EVM), allowing for easy migration of Ethereum-based dApps.
- Consensus Mechanism:
- Uses a Proof-of-Staked Authority (PoSA) model where validators are elected based on their stake of BNB tokens to secure the network.
- Native Token:
- BNB (Binance Coin) is the primary token used to pay transaction fees and participate in network governance.

# Risks Free Decentralized

What is DECENTRALIZATION ? What are its benefits and advantages? Decentralized marketing is created on an automated contract that guarantees you maximum security and stability. A SMART CONTRACT is an algorithm with automatic execution. It exists inside the Smart Chain blockchain\* , which is one of the top cryptocurrencies. Smart contracts, like cryptocurrencies themselves, are decentralized. They work strictly according to a certain program, and once they are launched, it is impossible to change their mode of operation. The code that determines the logic of a SMART CONTRACT is written in a BLOCKCHAIN and all calculations are performed by millions of computers around the world. This ensures that a smart contract cannot be hacked or stopped. '
